SUMMARY

Unity Game Developer with 1+ year of professional game development experience and 2 years teaching Unity and C#, building gameplay systems, VR for Meta Quest 3, and multiplayer games on Photon PUN 2. Shipped a Meta Quest 3 VR title and a bilingual (EN/AR) multiplayer training product. Architect scalable, event-driven code using ScriptableObject architectures, finite state machines, object pooling, and assembly-enforced module boundaries. Experienced with Git, Agile/Scrum, and AI-assisted development including Claude Code.

TECHNICAL SKILLS

Unity Engine — 1+ year professional · Unity 6, URP, Addressables, Input System, Localization
Programming — C#, Lua, JavaScript (three.js), HTML & CSS
Architecture — Design Patterns, Finite State Machines, Object Pooling, ScriptableObject Architecture, Assembly Definitions, SOLID
Multiplayer & Data — Photon PUN 2, Firebase Realtime Database, JSON Data Management, RTL Localization (Arabic/English)
Tools — Git, GitHub, GitLab, Fork, Blender, Substance Painter, Premiere Pro, Photoshop, Roblox Studio (6 mo.)

PROFESSIONAL EXPERIENCE

Junior Unity Game Developer, Zinad 07/2025 – Present | Remotely

- Developed a VR rhythm-action game for Meta Quest 3 — migrated from Oculus SDK 0.46.0 to Meta XR All-in-One SDK 72.0.0, rebuilt the player prefab using Building Blocks, and resolved Android build failures caused by a TMP3D shader incompatibility with GLES3 multiview stereo rendering
- Implemented dual-saber hit detection with a same-frame double-hit guard via Script Execution Order, and a DSP clock-based spawner syncing object pool releases to BPM
- Built a ScriptableObject-based state machine handling gameplay/quiz transitions with fully decoupled cross-system communication, and a quiz system with DOTween crossfade transitions and live Arabic/English locale switching
- Shipped ZiRunner, a bilingual (EN/AR) multiplayer endless runner for security-awareness training — outcome-authoritative Photon PUN 2 netcode, RTL Arabic localization, and a StreamingAssets JSON content pipeline editable post-ship without a rebuild

Game Development Instructor, Da3em Academy 05/2023 – 08/2025 | Remotely

- Instructed and mentored cohorts of students in Unity and Roblox game development, guiding them from initial concept to launching their first games
- Developed and delivered a full curriculum covering C# scripting, physics, UI/UX, animation, and project deployment

PROJECTS

C-RAM Air Defence System
Unity 6 technical demo. Nine assembly definitions enforcing a one-directional dependency graph; closed-form intercept solver; allocation-free SphereCast ballistics.

Emplacement
Open-source Unity package (MIT, UPM). Generic StateMachine<T>, ObjectPool<T>, asset-based cross-prefab references.

Cam3
Solo horror game. 7-state enemy FSM over a weighted node graph, event-driven ScriptableObject architecture.

ThreeJs Physics Lab
three.js physics platform. Three interchangeable experiments on a schema-driven framework; symplectic Euler integration; unit-tested pure physics modules.

VOLUNTEERING & INSTRUCTING

CIS Team MU — Team Leader & Game Development Instructor 09/2023 – 09/2024

- Led one of the university's largest student organizations (700+ members), coordinating 10+ large-scale events and technical workshops
- Trained 50+ members in Unity and C#, running game jams that produced 15+ completed prototypes; spoke and mentored at Beyond Earth, MagiCoders, and VICTORIS 4.0

EDUCATION

Bachelor's Degree in Software Engineering 09/2021 – 07/2025
Faculty of Computer and Information Sciences, Mansoura University

AWARDS

ITI Cairo GameJam 2025 Advanced Level Winner, **Information Technology Institute (Cairo University)** 01/2025

LANGUAGES

- Arabic (Native), English (Fluent – C2)
